

FRONT END DEVELOPER JOB DESCRIPTION

As our **Front End Developer**, you will be responsible for translating designs planned by the User Experience Designers into working interfaces. You will also need to be a strong team member who co-develops the user experience by providing advice on interface and interactivity techniques.

Responsibilities

1. Implement pixel-perfect working systems based on design inputs

- Collaborate with teammates to analyse, scope and implement Front End Engineering related tasks
- Provide accurate and practical assessment of the resources and schedule necessary of Front End Development tasks
- Contribute to the technical deployment, training and support activities of a Product

2. Follow development best practices

- Ensure the development of a quality solution by following rigorous testing processes
- Keep abreast of new visual/interaction technologies and techniques in the market and share insights and creative applications with the team

Skills and Experience Needed

- 1-2 years experience; open to enthusiastic fresh graduates
- In-depth knowledge of JavaScript, CSS and HTML.
- Good working knowledge of React.
- Experience working with Redux / Flux architectures.
- Strong familiarity with the front end open source ecosystem, and the ability to make appropriate platform choices for the task at hand.
- Experience developing maintainable and scalable code in a team of multiple front end developers.
- Understanding of front-end performance considerations
- Experience using CSS pre and post processors.
- Experience working with designers from the inception of a feature to production deployment.
- Experience with implementing responsive interfaces.
- Experience supporting multiple browsers using progressive enhancement / graceful degradation.
- Familiarity with version control systems, specifically Git.
- Genuine passion for great user experiences.

Note: This position will be based in our Jakarta office
